# Update to Creo Parametric

## Overview

Course Code TRN-5100-T

Course Length 8 Hours

In this course, you will learn how to utilize the variety of functionality enhancements in Creo Parametric 4.0. You will be introduced to user interface enhancements such as the mini toolbar and the new geometry selection filter. You will examine the Part Modeling enhancements to features such as negative depth, extrude features with offset depth, and new midplane datum plane type. You will learn about the new Sketcher enhancements, including the clipping the model, customizing line thickness, the new constraint appearance, and using sketch references. You will investigate the new Assembly capabilities such as automatic representations, mirror symmetry, and assigning materials. You will examine the new Datum Feature Symbol, Datum Target, Geometric Tolerance, and Driven Dimension functionality and workflows for 2-D drawings and review various detailing enhancements. You will learn the new Freestyle surfacing enhancements including using multiple objects, importing OBJ files, and using N-Gon faces, as well as new Style enhancements such as G3 connections, creating periodic and nonperiodic closed curves, and drop curves. Finally, you will learn to use the updated tools in Sheetmetal mode such as Twist Walls, Edge Bend Relief, and Close Corner edge treatment, as well as the enhancement for utilizing dependency control with punch and die forms. At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric

## Course Objectives

---

- Use the Interface enhancements in Creo Parametric 4.0
- Use the Part Modeling enhancements in Creo Parametric 4.0
- Use the Sketcher enhancements in Creo Parametric 4.0
- Use the Assembly Modeling enhancements in Creo Parametric 4.0
- Use the Drawing enhancements in Creo Parametric 4.0
- Use the Surfacing enhancements in Creo Parametric 4.0
- Use the Sheetmetal enhancements in Creo Parametric 4.0

## Prerequisites

---

- Introduction to Creo Parametric 3.0, or equivalent experience with Creo Parametric 3.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Interface Enhancements
--------	---	------------------------

Module	2	Part Modeling Enhancements
--------	---	----------------------------

Module	3	Sketcher Enhancements
--------	---	-----------------------

Module	4	Assembly Enhancements
--------	---	-----------------------

Module	5	Drawing Enhancements
--------	---	----------------------

Module	6	Surfacing Enhancements
--------	---	------------------------

Module	7	Sheetmetal Enhancements
--------	---	-------------------------

---

# Introduction to Creo Parametric

## Overview

---

Course Code TRN-5101-T

Course Length 40 Hours

In this course, you will learn core modeling skills and quickly become proficient with Creo Parametric 4.0. Topics include sketching, part modeling, assemblies, drawings, and basic model management techniques. The course also includes a comprehensive design project that enables you to practice your new skills by creating realistic parts, assemblies, and drawings. After completing the course, you will be well prepared to work effectively on product design projects using Creo Parametric 4.0.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric

## Course Objectives

---

- Learn the basic Creo Parametric modeling process
- Understand Creo Parametric concepts
- Learn how to use the Creo Parametric interface
- Select and edit geometry, features, and models
- Sketch geometry and use tools
- Create sketches for features
- Create datum planes and datum axes
- Create extrudes, revolves, and profile ribs
- Utilize internal sketches and embedded datums
- Create sweeps and blends
- Create holes, shells, and drafts
- Create rounds and chamfers
- Group, copy, and mirror items
- Create patterns
- Measure and inspect models
- Assemble with constraints
- Assemble with connections

- Explode assemblies
- Lay out drawings and create views
- Create drawing annotations
- Use layers
- Investigate parent/child relationships
- Capture and manage design intent
- Resolve failures and seek help
- Comprehensive two part Design Project

## Prerequisites

---

- None

## Audience

---

- This course is intended for product designers, drafters, industrial/conceptual designers, and routed systems designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to the Creo Parametric Basic Modeling Process
Module	2	Understanding Creo Parametric Concepts
Module	3	Using the Creo Parametric Interface
Module	4	Selecting Geometry, Features, and Models
Module	5	Editing Geometry, Features, and Models
Module	6	Creating Sketcher Geometry

### Day 2

---

Module	7	Using Sketcher Tools
Module	8	Creating Sketches for Features
Module	9	Creating Datum Features: Planes and Axes
Module	10	Creating Extrudes, Revolves, and Ribs
Module	11	Sketcher Workflow
Module	12	Creating Sweeps and Blends

### Day 3

---

Module	13	Creating Holes, Shells, and Draft
Module	14	Creating Rounds and Chamfers
Module	15	Project I
Module	16	Group, Copy, and Mirror Tools
Module	17	Creating Patterns
Module	18	Measuring and Inspecting Models

### Day 4

---

Module	19	Assembling with Constraints
Module	20	Assembling with Connections
Module	21	Exploding Assemblies
Module	22	Drawing Layout and Views
Module	23	Creating Drawing Annotations
Module	24	Using Layers

---

## Day 5

---

Module	25	Investigating Parent/Child Relationships
--------	----	--

Module	26	Capturing and Managing Design Intent
--------	----	--------------------------------------

Module	27	Resolving Failures and Seeking Help
--------	----	-------------------------------------

Module	28	Project II
--------	----	------------

---

# Advanced Modeling using Creo Parametric

## Overview

---

Course Code	TRN-5102-T
Course Length	24 Hours

The Advanced Modeling using Creo Parametric 4.0 training course teaches you how to use advanced part modeling techniques to improve your product designs. In this course, you will learn how to create and modify design models using advanced sketching techniques and feature creation tools. You will also learn how to reuse existing design geometry when creating new design models. After completing this course, you will be well prepared to work efficiently with complex product designs using Creo Parametric 4.0.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric.

## Course Objectives

---

- Learn advanced selection techniques
  - Create advanced datum features
  - Use advanced sketching techniques
  - Create advanced holes
  - Create advanced drafts and ribs
  - Create advanced shells
  - Create advanced rounds and chamfers
  - Use relations and parameters
  - Create advanced blends
  - Create sweeps with variable sections
  - Create helical sweeps and 3D sweeps
  - Create swept blends
  - Learn advanced layer techniques
  - Learn advanced reference management techniques
  - Create family tables
  - Reuse features
  - Learn advanced copy techniques
  - Create advanced patterns
-

## Prerequisites

---

- Introduction to Creo Parametric

## Audience

---

- This course is intended for mechanical designers, design engineers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Advanced Selection
Module	2	Advanced Datum Features
Module	3	Advanced Sketching
Module	4	Advanced Hole Creation
Module	5	Advanced Drafts and Ribs
Module	6	Advanced Shells
Module	7	Advanced Rounds and Chamfers

### Day 2

---

Module	8	Relations and Parameters
Module	9	Advanced Blends
Module	10	Sweeps with Variable Sections
Module	11	Helical Sweeps
Module	12	Swept Blends and Advanced Bends

### Day 3

---

Module	13	Advanced Layers
Module	14	Advanced Reference Management
Module	15	Family Tables
Module	16	Reusing Features
Module	17	Advanced Copy
Module	18	Advanced Patterns

---

# Advanced Assembly Design using Creo Parametric 4.0

## Overview

Course Code TRN-5103-T

Course Length 24 Hours

In this course, you will learn how to use Creo Parametric 4.0 to create and manage complex assemblies. You will discover how to use advanced assembly tools that enable you to add and maintain designs, increase your efficiency, and increase system performance when working with large assemblies. In addition, you will learn the basics of using and creating predefined assembly structures and skeletons, which are both valuable tools typically used in a top-down design process. The course also includes an assembly design project that enables you to practice your new skills by performing various design tasks in an assembly model.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0

## Course Objectives

- Use advanced component selection
- Use advanced assembly constraints
- Create and use component interfaces
- Utilize intelligent fasteners
- Create and use flexible components
- Restructure and mirror assemblies
- Use assembly features and shrinkwrap
- Replace components in an assembly
- Understand the basics of simplified reps
- Create cross-sections, display styles, and combined views
- Substitute components by reps, envelopes, and simplified reps

- Understand advanced simplified rep functionality
- Create and use assembly structure and skeletons
- Utilize design exploration

## Prerequisites

---

- Introduction to Creo Parametric 4.0
- Update to Creo Parametric 4.0 from Creo Parametric 3.0

## Audience

---

- This course is intended for design engineers and mechanical designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Advanced Component Selection
Module	2	Using Advanced Assembly Constraints
Module	3	Creating and Using Component Interfaces
Module	4	Utilizing Intelligent Fasteners
Module	5	Creating and Using Flexible Components
Module	6	Restructuring and Mirroring Assemblies

### Day 2

---

Module	7	Using Assembly Features and Shrinkwrap
Module	8	Replacing Components in an Assembly
Module	9	Understanding the Basics of Simplified Reps
Module	10	Creating Cross-Sections, Display Styles, Layer States, and Combined Views

### Day 3

---

Module	11	Substituting Components Using User Defined, Envelopes, and Simplified Reps
Module	12	Understanding Advanced Simplified Rep Functionality
Module	13	Creating and Using Assembly Structure and Skeletons
Module	14	Utilizing Design Exploration
Module	15	Project

---

# Introduction to Creo Simulate 4.0

## Overview

Course Code TRN-5104-T

Course Length 40 Hours

In this course, you will learn how to test, validate, and optimize product designs with the Creo Simulate module. Creo Simulate enables you to simulate structural and thermal loads on product designs. You will complete comprehensive, hands-on lab exercises that simulate realistic analysis and design optimization activities. You will also be introduced to advanced topics such as dynamic analyses, combined mechanical and thermal analyses, and Optimization Studies. After completing the course, you will be able to run engineering analyses and optimizations on your product design models.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Simulate 4.0

## Course Objectives

- Understand the basic Simulate analysis process
- Understand theory and simulate model topics
- Explore results
- Explore materials and material properties
- Understand and use Simulate idealizations
- Understand and use structural loads
- Understand and use structural constraints
- Run structural analyses
- Understand convergence
- Analyze assemblies with Simulate
- Complete design and sensitivity studies
- Run optimization studies
- Understand the basics of Thermal analysis

## Prerequisites

---

- Three months of Pro/ENGINEER Wildfire 5.0 or Creo Parametric experience

## Audience

---

- This course is intended for design engineers and mechanical designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Creo Simulate
Module	2	Theoretical Foundations
Module	3	Simulation Models
Module	4	Materials and Material Properties
Module	5	Structural Constraints
Module	6	Structural Loads

### Day 2

---

Module	7	Meshing
Module	8	Convergence
Module	9	Structural Analysis
Module	10	Introduction to Results Evaluation

### Day 3

---

Module	11	Refining the Design
Module	12	Basic Model Debugging
Module	13	Singularities

### Day 4

---

Module	14	Analyzing Assemblies
Module	15	Shells
Module	16	Idealizations

### Day 5

---

Module	17	Thermal Analysis
Module	18	Advanced Analysis
Module	19	Project

---

# Detailing Using Creo Parametric 4.0

## Overview

Course Code TRN-5105-T

Course Length 24 Hours

In this course, you will learn how to quickly create detailed drawings using information captured within 3-D design models. You will also learn how to create drawings, how to detail drawings, and how to take advantage of the parametric and associative nature of Creo Parametric 4.0 when configuring drawings. After completing this course, you will be able to create production drawings suitable for manufacturing.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

## Course Objectives

- Understand the drawing development process
- Create new drawings using formats and drawing templates
- Create different types of views in drawings
- Create dimensions and notes
- Control display options using layers
- Apply dimensional and geometric tolerances in drawings
- Add draft geometry and symbols to drawings
- Use layers in drawings to control the display of views and detail items
- Create drawing tables and a bill of materials
- Create drawing formats
- Configure the drawing environment
- Manage large drawings

## Prerequisites

---

- Introduction to Creo Parametric 4.0

## Audience

---

- This course is intended for mechanical designers and design engineers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Drawings
--------	---	--------------------------

Module	2	Creating New Drawings
--------	---	-----------------------

Module	3	Creating Drawing Views
--------	---	------------------------

### Day 2

---

Module	4	Adding Model Details to Drawings
--------	---	----------------------------------

Module	5	Adding Notes to Drawings
--------	---	--------------------------

Module	6	Adding Tolerance Information
--------	---	------------------------------

Module	7	Adding Draft Geometry and Symbols
--------	---	-----------------------------------

### Day 3

---

Module	8	Using Layers in Drawings
--------	---	--------------------------

Module	9	Creating and Using Tables in Drawings
--------	---	---------------------------------------

Module	10	Using Report Information in Drawings
--------	----	--------------------------------------

Module	11	Creating Drawing Formats
--------	----	--------------------------

Module	12	Configuring the Drawing Environment
--------	----	-------------------------------------

Module	13	Managing Large Drawings
--------	----	-------------------------

---

# Surfacing Using Creo Parametric

## Overview

Course Code TRN-5106-T

Course Length 24 Hours

In this course, you will learn how to use various techniques to create complex surfaces with tangent and curvature continuities. You will also learn how to manipulate surfaces using editing tools, and analyze surfaces for quality and desired characteristics. In addition, you will learn how to create solid features using the surfaces as references. After completing this course, you will be well prepared to create complex shaped models using surfaces in Creo Parametric.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo 360.

## Course Objectives

- Describe surface modeling and its terminology
- Learn advanced selection techniques
- Create advanced datum features
- Use advanced sketching techniques
- Learn basic surfacing tools
- Create various boundary surfaces
- Create variable section sweep surfaces
- Create helical sweep surfaces
- Create swept blend surfaces
- Utilize surface analysis tools
- Extend and trim surfaces
- Manipulate surfaces
- Create and edit solid models using surface quilts
- Utilize the master model technique

## Prerequisites

---

- Introduction to Creo Parametric

## Audience

---

- This course is intended for mechanical designers, design engineers, industrial designers, and related roles
-

## Agenda

### Day 1

---

Module	1	Surface Modeling Overview
--------	---	---------------------------

Module	2	Advanced Selection
--------	---	--------------------

Module	3	Advanced Datum Features
--------	---	-------------------------

Module	4	Advanced Sketching
--------	---	--------------------

Module	5	Basic Surfacing Tools
--------	---	-----------------------

Module	6	Boundary Blend Surfaces
--------	---	-------------------------

### Day 2

---

Module	7	Sweep Surfaces with Variable Sections
--------	---	---------------------------------------

Module	8	Helical Sweeps
--------	---	----------------

Module	9	Swept Blends
--------	---	--------------

Module	10	Analyzing Surface Curvature
--------	----	-----------------------------

Module	11	Additional Surface Analysis Tools
--------	----	-----------------------------------

### Day 3

---

Module	12	Extending and Trimming Surfaces
--------	----	---------------------------------

Module	13	Manipulating Surfaces
--------	----	-----------------------

Module	14	Creating and Editing Solids using Quilts
--------	----	--

Module	15	Master Model Technique
--------	----	------------------------

Module	16	Project
--------	----	---------

---

# Sheetmetal using Creo Parametric 4.0

## Overview

Course Code TRN-5107-T

Course Length 16 Hours

In this course, you will learn how to create sheetmetal parts in Creo Parametric. The course builds upon the basic lessons you learned in Introduction to Creo Parametric 4.0 and serves as the second stage of learning. In this course, you will learn how to design sheetmetal parts and assemblies, including sheetmetal production drawings. All the functions needed to create sheetmetal parts, drawings, and assemblies are covered. Upon completion of this course, you will be able to create sheetmetal design models, create the flat state of the model, and document both in production drawings.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

## Course Objectives

- Create, convert, and display the sheetmetal model
- Use methods of developed length calculation
- Use primary and secondary wall features, as well as partial walls
- Use bend relief
- Use unbend and bend back features
- Apply sheetmetal bend features
- Use flat patterns
- Create sheetmetal cuts
- Create forms
- Use notch and punch features
- Utilize the sheetmetal environment setup, sheetmetal design information tools, and sheetmetal design rules
- Detail sheetmetal designs

## Prerequisites

---

- Introduction to Creo Parametric 4.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles can also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to the Creo Parametric Sheetmetal Design Process
Module	2	Sheetmetal Model Fundamentals
Module	3	Creating Primary Sheetmetal Wall Features
Module	4	Creating Secondary Sheetmetal Wall Features

### Day 2

---

Module	5	Bending and Unbending Sheetmetal Models
Module	6	Sheetmetal Form Features
Module	7	Modifying Sheetmetal Models
Module	8	Sheetmetal Setup and Tools
Module	9	Detailing Sheetmetal Designs
Module	10	Design Project

---

# Milling using Creo Parametric 4.0

## Overview

---

Course Code	TRN-5108-T
Course Length	40 Hours

In this course, you will learn how to machine products using Creo Parametric manufacturing tools. This course covers creating tool paths for three axis milling machines. During the course, you will learn how to complete each phase of the manufacturing process. You will start by creating manufacturing models and configuring the manufacturing environment. This will include configuring tools, fixtures, and machining operations. You will then learn how to create milling sequences, holmaking sequences, and post-process cutter location (CL) data to create machine code. After completing the course, you will be able to create numerical control (NC) programs for milling machines and post-process cutter location (CL) data to create machine specific code.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 B000.

## Course Objectives

---

- Understand the manufacturing process
- Create and configure manufacturing models
- Configure the manufacturing environment
- Create and modify milling sequences
- Create and modify holmaking sequences
- Use the process manager to create NC sequences
- Post-process cutter location (CL) data

## Prerequisites

---

- Introduction to Creo Parametric – Fundamentals (Web Based Training) or equivalent experience

## Audience

---

- This course is intended for manufacturing engineers and NC machinists
-

## Agenda

### Day 1

---

Module	1	Introduction to Manufacturing
Module	2	Creating Manufacturing Models
Module	3	Configuring Operations
Module	4	Using Reference Models
Module	5	Using Workpiece Models
Module	6	Creating and Using NC Model Assemblies
Module	7	Creating and Configuring a Work Center

### Day 2

---

Module	8	Creating and Configuring Tools
Module	9	Using Template Manufacturing Models
Module	10	Using Manufacturing Parameters
Module	11	Creating Face Milling Sequences

### Day 3

---

Module	12	Creating Volume Milling Sequences
Module	13	Creating Profile Milling Sequences
Module	14	Creating Straight Cut Surface Milling Sequences
Module	15	Creating From Surface Isolines Surface Milling Sequences

### Day 4

---

Module	16	Creating Cut Line Surface Milling Sequences
Module	17	Advanced Surface Milling Options
Module	18	Creating Roughing and Re-roughing Sequences
Module	19	Creating Finishing Sequences

### Day 5

---

Module	20	Creating Trajectory Milling Sequences
Module	21	Creating Holemaking Sequences
Module	22	Creating Engraving Sequences
Module	23	Using the Process Manager
Module	24	Creating and Post-Processing CL Data Files

---

# Introduction to Model Based Definition with Creo Parametric 4.0

## Overview

Course Code TRN-5109-T

Course Length 8 Hours

In this course, you will learn how to create an MBD model using a start part. You will discover how annotate mode provides the tools to create an MBD model using the MBD process within Creo Parametric 4.0. You will also learn about creating 3-D annotations and how to utilize them in combined states. You will manage the visibility of annotations within combination states. You will also create and modify various annotation elements, including dimensions, ordinate dimensions, datum reference features, geometric tolerances, surface finishes, symbols, notes, and datum targets.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 F000.

## Course Objectives

- Understand the introduction to Model Based Definition
- Prepare models for annotation
- Create annotation elements
- Modify annotation elements
- Complete combination states
- Publish for technical data packages

## Prerequisites

---

- Core Creo knowledge in parts and drawings
- Experience in Creo modeling
- Experience in Creo drawing creation

## Audience

---

- This course is intended for any CAD designer involved in creating Model Based Definition models at his or her company. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Model Based Definition
Module	2	Preparing Models for Annotation
Module	3	Creating Annotation Elements
Module	4	Modifying Annotation Elements
Module	5	Completing Combination States
Module	6	Publishing for Technical Data Packages

---

# Introduction to Creo Direct 4.0

## Overview

Course Code **TRN-5110-T**

Course Length **8 Hours**

In this course, you will learn direct modeling using Creo Direct 4.0. You will become familiar with Creo Direct's interface and approach to direct modeling, including how to quickly create sketches with precision, transform sketches into 3-D shapes, and directly manipulate existing geometry with ease. You will also learn how to assemble and reposition components in an assembly, as well as use existing geometry in an assembly to create part geometry.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Direct 4.0.

## Course Objectives

- Understand the Direct Modeling approach to creating geometry
- Sketch precise 2-D geometry without constraints
- Create 3-D shapes from the 2-D geometry by extruding, revolving, and sweeping sketches and sketch regions
- Create datum axes and datum planes
- Create engineering geometry, including holes, rounds, chamfers, draft, and shells
- Pattern geometry in one and two directions
- Use measure tools and create part and assembly cross-sections
- Rapidly select and directly modify 3-D shapes in your models
- Understand the direct approach to creating assemblies
- Edit component position in an assembly
- Create new components and design components in the context of an assembly

## Prerequisites

---

- Introduction to Creo Parametric or equivalent experience

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Creo Direct
Module	2	Creating Sketches in 2-D Mode
Module	3	Creating Geometry Shapes
Module	4	Creating Datums
Module	5	Creating Engineering Geometry
Module	6	Measurements and Sections
Module	7	Editing 3-D Geometry
Module	8	Working with Assemblies

---

# Introduction to Creo Layout 4.0

## Overview

Course Code	TRN-5112-T
Course Length	8 Hours

In this course, you will learn about Layout, a Creo module that is used for creating unconstrained 2-D designs that can be leveraged in 3-D models. You will investigate the concepts behind Creo Layout, a typical workflow, and the user interface. You will also learn how Layout utilizes precision panels and sketching guides to intelligently sketch a variety of 2-D geometry, as well as learn how to manipulate, organize, and import layout geometry. Finally, you will learn how to leverage 2-D Layout designs in 3-D models.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Layout 4.0 M020.

## Course Objectives

- Understand Layout sketching methodology
- Sketch Layout geometry
- Manipulate Layout geometry
- Organize Layout geometry
- Import Layout geometry
- Annotate Layouts
- Utilize Layouts in 3-D models

## Prerequisites

---

- Introduction to Creo Parametric 4.0 (optional)

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Layout
Module	2	Layout Sketching Methodology
Module	3	Sketching Layout Geometry
Module	4	Manipulating Layout Geometry
Module	5	Organizing Layout Geometry
Module	6	Importing Layout Geometry
Module	7	Annotating Layouts
Module	8	Utilizing Layouts in 3-D Models

---

# Introduction to Creo Options Modeler 4.0

## Overview

Course Code TRN-5113-T

Course Length 8 Hours

In this course, you will learn how to use Creo Options Modeler to create configurable assemblies. You will begin by exploring a completed configurable assembly that has multiple variations created. You will then learn how to establish interchangeability between components, and how to create and assemble configurable products, configurable modules, and module variants. Then, you will become familiar with the creation of options and choices, which will enable you to explore usage of the Variant Builder to configure assembly variants. Finally, you learn how to leverage an existing design assembly and develop a configurable product assembly containing multiple design variations.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 (F000).

## Course Objectives

- Understand and use Creo Options Modeler
- Create interchange assemblies
- Create configurable modules and products
- Define options and choices
- Utilize configurable assemblies
- Understand how to manage large Options Modeler assemblies with and without Windchill

## Prerequisites

---

- Introduction to Creo Parametric 4.0
- Advanced Assembly Design using Creo Parametric 4.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Creo Options Modeler
Module	2	Creating Interchange Assemblies
Module	3	Creating Configurable Modules and Products
Module	4	Defining Options and Choices
Module	5	Utilizing Configurable Assemblies
Module	6	The Options Modeler with Very Large Assemblies and Windchill
Module	7	Project

---

# Introduction to Schematics 4.0

## Overview

Course Code	TRN-5114-T
Course Length	24 Hours

In this course, you will learn how to use Creo Schematics to create schematic diagrams for both electrical harness and piping designs. You will also learn how to administer the Creo Schematics working environment, configure the catalog library, and create functional block diagrams and block interconnect diagrams. In addition, you will learn how to create electrical circuit diagrams, wiring diagrams (including wire interconnect diagrams), and process and instrumentation design diagrams for piping systems. Finally, you will learn how to use wiring diagrams and process and instrumentation design diagrams to configure 3-D harness designs and industrial piping designs created within Creo Parametric.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Schematics 4.0.

## Course Objectives

- Understand the 2-D schematic design processes for electrical harness designs and piping designs
- Configure the Creo Schematics working environment
- Create and configure the catalog library
- Create functional block diagrams (including block interconnect diagrams)
- Create circuit diagrams
- Create wiring diagrams (including wire interconnect diagrams)
- Create process and instrumentation design diagrams
- Communicate diagram information to Creo Parametric

## Prerequisites

---

- None

## Audience

---

- This course is intended for engineers involved in the schematic 2-D layout of either electrical diagrams or piping diagrams. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to Creo Schematics
Module	2	Configuring the Working Environment
Module	3	Configuring Designs and Diagram Sheets
Module	4	Configuring Catalog Properties
Module	5	Creating Design Templates and Template Sheets
Module	6	Using Creo Schematics Tools

### Day 2

---

Module	7	Creating Catalog Artifacts
Module	8	Creating and Configuring a Central Catalog
Module	9	Reviewing Designs
Module	10	Instancing and Manipulating Objects
Module	11	Creating Block Diagrams

### Day 3

---

Module	12	Creating Wiring Diagrams
Module	13	Creating Interconnect Diagrams
Module	14	Automated Design Process for CID to WID
Module	15	Creating P and ID Diagrams
Module	16	Using Schematic Design Data in Creo Parametric Harness and Piping Designs
Module	17	Using Pro/DIAGRAM Information

---

## Cabling using Creo Parametric 4.0

### Overview

---

Course Code	TRN-5115-T
Course Length	24 Hours

In this course, you will learn how to create 3-D electrical harnesses using Creo Parametric 4.0. This includes using Creo Schematics to pass schematic diagram information into the 3-D harness designs created within Creo Parametric 4.0. You will learn how to route electrical harnesses both with and without schematic diagram information, create flattened harnesses for manufacturing, and document harness designs by creating flattened harness drawings that include customized BOM tables and wire list information.

A significant portion of the course is devoted to a cabling design project, during which you will create a full wiring harness with minimal *picks and clicks* to solidify techniques learned previously in the course.

After successfully completing the course, you will be able to create 3-D electrical harnesses and associated manufacturing deliverables using Creo Parametric 4.0. Optionally, you may wish to attend the Introduction to Creo Schematics course. This will enable a full understanding of the schematic design process used to provide schematic data for the creation of electrical harness assemblies in Creo Parametric 4.0. At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

---

## Course Objectives

---

- Understand the basic Creo Parametric cabling process
- Create harness assembly structures
- Set up for cabling
- Route wires and cables
- Modify wire routings
- Route and utilize networks
- Establish logical references
- Create harness components and cosmetics
- Create a flat harness
- Document harness designs
- Navigate through a comprehensive design project

## Prerequisites

---

- Introduction to Creo Parametric 4.0 or equivalent experience
- Introduction to Creo Schematics 4.0 (optional)

## Audience

---

- This course is intended for engineers involved in the 3-D routing and documenting of electrical wiring and cabling harnesses. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to the Creo Parametric Basic Cabling Process
Module	2	Creating Harness Assembly Structures
Module	3	Setting Up for Cabling
Module	4	Routing Wires and Cables
Module	5	Modifying Wire Routings

### Day 2

---

Module	6	Routing and Utilizing Networks
Module	7	Establishing Logical References
Module	8	Routing Wires and Cables Using Logical Data
Module	9	Creating Harness Components and Cosmetics
Module	10	Creating Flat Harnesses

### Day 3

---

Module	11	Documenting Harness Designs
Module	12	Project (Creo Schematics-Based)
Module	13	Project (Manual Routing)

---

# Mechanism Design using Creo Parametric 4.0

## Overview

Course Code TRN-5121-T

Course Length 8 Hours

In this course, you will learn about creating mechanism connections, configuring the mechanism model, creating a kinematic analysis, and evaluating results. Mechanism Design using Creo Parametric is designed for experienced users who want to add motion to their models by creating mechanism connections and servo motors. In Creo Parametric you can add motion to your models using the standard mechanism functionality, often referred to as the Mechanism Design Extension (MDX). These topics will enable you to simulate the range of motion between components in your moving assemblies, create gear connections that simulate the gear ratios, create Cam connections that enable Creo Parametric parts to “push” other parts they come into contact with, and check for collisions between moving components. After completing this course, you will be prepared to work on mechanism designs using Creo Parametric Mechanism Design.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

## Course Objectives

- Introduce the mechanism design process
- Create mechanism connections
- Configure motion and analysis
- Evaluate analysis results

## Prerequisites

---

- Introduction to Creo Parametric

## Audience

---

- This course is intended for design engineers and mechanical designers who need to add and evaluate the motion of their assemblies. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to the Mechanism Design Process
Module	2	Creating Mechanism Connections
Module	3	Configuring Motion and Analysis
Module	4	Evaluating Analysis Results

---

# Mechanism Simulation Using Creo Parametric 4.0

## Overview

Course Code	TRN-5122-T
Course Length	8 Hours

In this course, you will focus on learning advanced modeling and analysis skills. Topics will include developing the 3-D model, analyzing the mechanism model, and evaluating results. This course is designed for those with experience who want to add motion to their products and analyze dynamic reactions of moving components. These topics will enable you to measure dynamic reactions of components, measure the force required to keep a mechanism balanced, and determine the resting state of a mechanism. After completing this course, you will be prepared to work on mechanism designs using Creo Parametric Mechanism Dynamics Option (MDO).

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0

## Course Objectives

- Understand the mechanism dynamics option
- Apply force motors, springs, and dampers to assemblies
- Apply forces, torques, and gravity to assemblies
- Create dynamic analyses
- Create force balance analyses
- Create static analyses
- Measure forces, velocities, accelerations, and other reactions
- Evaluate results

## Prerequisites

---

- Introduction to Creo Parametric
- Mechanism Design using Creo Parametric

## Audience

---

- This course is intended for design engineers and mechanical designers who need to add and evaluate the motion of their assemblies. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to the Mechanism Simulation Process
Module	2	Adding Dynamic Entities to a Mechanism
Module	3	Analyzing the Mechanism Model
Module	4	Evaluating Analysis Results
Module	5	Project

---

# Update to Creo Parametric 4.0 from Creo Parametric 2.0

## Overview

Course Code TRN-5125-T

Course Length 16 Hours

In this course, you will learn how to utilize the variety of functionality enhancements in Creo Parametric 4.0. You will be introduced to user interface enhancements such as the mini toolbar and the new geometry selection filter. You will examine the Part Modeling enhancements to features such as negative depth, extrude features with offset depth, and new midplane datum plane type. You will learn about the new Sketcher enhancements, including the clipping the model, customizing line thickness, the new constraint appearance, and using sketch references. You will investigate the new Assembly capabilities such as automatic representations, mirror symmetry, and assigning materials. You will examine the new Datum Feature Symbol, Datum Target, Geometric Tolerance, and Driven Dimension functionality and workflows for 2-D drawings and review various detailing enhancements. You will learn the new Freestyle surfacing enhancements including using multiple objects, importing OBJ files, and using N-Gon faces, as well as new Style enhancements such as G3 connections, creating periodic and nonperiodic closed curves, and drop curves. You will learn to use the updated tools in Sheetmetal mode such as Twist Walls, Edge Bend Relief, and Close Corner edge treatment, as well as the enhancement for utilizing dependency control with punch and die forms. Finally, you will investigate the new Assembly capabilities such as the built-in hardware library and the Intelligent Fastener extension, as well as enhanced Assembly functionality such as heterogeneous (multi-CAD) assembly and the Design Exploration extension.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 (F000)

## Course Objectives

---

- Use the Interface enhancements in Creo Parametric 4.0
- Use the Part Modeling enhancements in Creo Parametric 4.0
- Use the Sketcher enhancements in Creo Parametric 4.0
- Use the Assembly Modeling enhancements in Creo Parametric 4.0
- Use the Drawing enhancements in Creo Parametric 4.0
- Use the Surfacing enhancements in Creo Parametric 4.0
- Use the Sheetmetal enhancements in Creo Parametric 4.0
- Use the Intelligent Fastener extension in Creo Parametric 4.0
- Use the Design Exploration extension in Creo Parametric 4.0
- Use Unite Technology in Creo Parametric 4.0

## Prerequisites

---

- Introduction to Creo Parametric 2.0, or equivalent experience with Creo Parametric 2.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Interface Enhancements
Module	2	Part Modeling Enhancements
Module	3	Sketcher Enhancements
Module	4	Assembly Enhancements
Module	5	Drawing Enhancements

### Day 2

---

Module	6	Surfacing Enhancements
Module	7	Sheetmetal Enhancements
Module	8	Utilizing Intelligent Fasteners
Module	9	Utilizing Design Exploration
Module	10	Using Unite Technology

---

# Creo Parametric 4.0 for SolidWorks Users

## Overview

Course Code TRN-5126-T

Course Length 24 Hours

In this course, you will learn about core modeling skills. This comprehensive, hands-on course is specifically designed for existing SolidWorks users who want to become proficient with Creo Parametric as quickly as possible. Topics include understanding the interface and basic Creo Parametric concepts, selecting and editing, sketching tools, and basic feature, part, and assembly creation. The course also includes a comprehensive design project that enables you to practice your new skills by creating realistic parts. After completing the course, you will be well prepared to work effectively on product design projects using Creo Parametric.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 M010.

## Course Objectives

- Learn the basic Creo Parametric modeling process
- Learn how to use the Creo Parametric interface
- Select and edit geometry, features, and models
- Sketch geometry and use tools
- Create sketches for features
- Create extrudes, revolves, and profile ribs
- Utilize internal sketches
- Create sweeps and blends
- Create holes, shells, and drafts
- Create rounds and chamfers
- Assemble with constraints
- Lay out drawings and create views
- Create drawing annotations

- Investigate parent/child relationships
- Resolve failures and seek help
- Complete a comprehensive design project

## Prerequisites

---

- Knowledge of SolidWorks, including an understanding of solid modeling, feature-based, parametric, and associative concepts

## Audience

---

- This course is intended for product designers, drafters, and industrial/conceptual designers. People in related roles can also benefit from taking this course.
-

## Agenda

### Day 1

---

Module	1	Introduction to the Creo Parametric Basic Modeling Process
Module	2	Using the Creo Parametric Interface
Module	3	Editing Geometry, Features, and Models
Module	4	Sketcher Geometry and Tools

### Day 2

---

Module	5	Creating Extrudes, Revolves, and Ribs
Module	6	Creating Sweeps and Blends
Module	7	Creating Holes, Shells, and Draft
Module	8	Creating Rounds and Chamfers

### Day 3

---

Module	9	Project I
Module	10	Assembling with Constraints
Module	11	Introduction to Drawings
Module	12	Resolving Failures and Seeking Help

---

## Web Based Curriculum Guide

# Introduction to Creo Parametric 4.0 – Fundamentals

## Overview

---

Course Code WBT-5101-A

Course Length 20 Hours

In this course, you will focus on learning core modeling skills. Topics include understanding the interface and basic Creo Parametric concepts, selecting and editing, sketching and sketcher tools, and basic feature creation. This course also includes a comprehensive design project that enables you to practice your new skills by creating realistic parts. After completing this course, you will be well-prepared to work effectively on product design projects using Creo Parametric. You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

## Course Objectives

---

- Learn the basic Creo Parametric modeling process
- Understand Creo Parametric concepts
- Learn how to use the Creo Parametric interface
- Select and edit geometry, features, and models
- Sketch geometry and use tools
- Create sketches for features
- Create datum planes and datum axes
- Create extrudes, revolves, and profile ribs
- Utilize internal sketches and embedded datums
- Create sweeps and blends
- Create holes, shells, and drafts
- Create rounds and chamfers
- Complete the comprehensive design project

## Prerequisites

---

- None

## Audience

---

- This course is intended for product designers, drafters, industrial/conceptual designers, and routed systems designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to the Creo Parametric Basic Modeling Process
Module	2	Understanding Creo Parametric Concepts
Module	3	Using the Creo Parametric Interface
Module	4	Selecting Geometry, Features, and Models
Module	5	Editing Geometry, Features, and Models
Module	6	Creating Sketcher Geometry
Module	7	Using Sketcher Tools
Module	8	Creating Sketches for Features
Module	9	Creating Datum Features: Planes and Axes
Module	10	Creating Extrudes, Revolves, and Ribs
Module	11	Sketcher Workflow

# Introduction to Creo Parametric 4.0 – Productivity Tools

## Overview

---

Course Code      WBT-5101-B

Course Length    20 Hours

In this course, you will focus on learning advanced modeling skills. Topics include patterning; measuring and inspecting models; group, copy, and mirror tools; assembly creation; explode states and explode line creation; drawing creation; using layers; investigating parent/child relationships; capturing design intent; and resolving failures and seeking help. This course also includes a comprehensive design project that enables you to practice your new skills by creating realistic parts, assemblies, and drawings. After completing this course, you will be well prepared to work effectively on product design projects using Creo Parametric.

You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

## Course Objectives

---

- Group, copy, and mirror items
- Create patterns
- Measure and inspect models
- Assemble with constraints
- Assemble with connections
- Explode assemblies
- Lay out drawings and create views
- Create drawing annotations
- Use layers
- Investigate parent/child relationships
- Capture and manage design intent
- Resolve failures and seek help
- Complete the comprehensive design project

## Prerequisites

---

- Introduction to Creo Parametric – Fundamentals
-

## Audience

---

- This course is intended for product designers, drafters, industrial/conceptual designers, and routed systems designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Group, Copy, and Mirror Tools
Module	2	Creating Patterns
Module	3	Measuring and Inspecting Models
Module	4	Assembling with Constraints
Module	5	Assembling with Connections
Module	6	Exploding Assemblies
Module	7	Drawing Layout and Views
Module	8	Creating Drawing Annotations
Module	9	Using Layers
Module	10	Investigating Parent/Child Relationships
Module	11	Capturing and Managing Design Intent
Module	12	Resolving Failures and Seeking Help
Module	13	Project II
Module	14	Appendix

# Advanced Modeling using Creo Parametric 4.0

## Overview

---

Course Code	WBT-5102-0
Course Length	24 Hours

The Advanced Modeling using Creo Parametric 4.0 training course teaches you how to use advanced part modeling techniques to improve your product designs. In this course, you will learn how to create and modify design models using advanced sketching techniques and feature creation tools. You will also learn how to reuse existing design geometry when creating new design models. After completing this course, you will be well prepared to work efficiently with complex product designs using Creo Parametric 4.0.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

## Course Objectives

---

- Learn advanced selection techniques
  - Create advanced datum features
  - Use advanced sketching techniques
  - Create advanced holes
  - Create advanced drafts and ribs
  - Create advanced shells
  - Create advanced rounds and chamfers
  - Use relations and parameters
  - Create advanced blends
  - Create sweeps with variable sections
  - Create helical sweeps and 3D sweeps
  - Create swept blends
  - Learn advanced layer techniques
  - Learn advanced reference management techniques
  - Create family tables
  - Reuse features
  - Learn advanced copy techniques
  - Create advanced patterns
-

## Prerequisites

---

- Introduction to Creo Parametric 4.0

## Audience

---

- This course is intended for mechanical designers, design engineers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Advanced Selection
Module	2	Advanced Datum Features
Module	3	Advanced Sketching
Module	4	Advanced Hole Creation
Module	5	Advanced Drafts and Ribs
Module	6	Advanced Shells
Module	7	Advanced Rounds and Chamfers
Module	8	Relations and Parameters
Module	9	Advanced Blends
Module	10	Sweeps with Variable Sections
Module	11	Helical Sweeps
Module	12	Swept Blends and Advanced Bends
Module	13	Advanced Layers
Module	14	Advanced Reference Management
Module	15	Family Tables
Module	16	Reusing Features
Module	17	Advanced Copy
Module	18	Advanced Patterns

---

# Advanced Assembly Design using Creo Parametric 4.0

## Overview

Course Code WBT-5103-0

Course Length 24 Hours

In this course, you will learn how to use Creo Parametric 4.0 to create and manage complex assemblies. You will discover how to use advanced assembly tools that enable you to add and maintain designs, increase your efficiency, and increase system performance when working with large assemblies. In addition, you will learn the basics of using and creating predefined assembly structures and skeletons, which are both valuable tools typically used in a top-down design process. The course also includes an assembly design project that enables you to practice your new skills by performing various design tasks in an assembly model.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0

## Course Objectives

- Use advanced component selection
- Use advanced assembly constraints
- Create and use component interfaces
- Utilize intelligent fasteners
- Create and use flexible components
- Restructure and mirror assemblies
- Use assembly features and shrinkwrap
- Replace components in an assembly
- Understand the basics of simplified reps
- Create cross-sections, display styles, and combined views
- Substitute components by reps, envelopes, and simplified reps

- Understand advanced simplified rep functionality
- Create and use assembly structure and skeletons
- Utilize design exploration

## Prerequisites

---

- Introduction to Creo Parametric 4.0
- Update to Creo Parametric 4.0 from Creo Parametric 3.0

## Audience

---

- This course is intended for design engineers and mechanical designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Advanced Component Selection
Module	2	Using Advanced Assembly Constraints
Module	3	Creating and Using Component Interfaces
Module	4	Utilizing Intelligent Fasteners
Module	5	Creating and Using Flexible Components
Module	6	Restructuring and Mirroring Assemblies
Module	7	Using Assembly Features and Shrinkwrap
Module	8	Replacing Components in an Assembly
Module	9	Understanding the Basics of Simplified Reps
Module	10	Creating Cross-Sections, Display Styles, Layer States, and Combined Views
Module	11	Substituting Components Using User Defined, Envelopes, and Simplified Reps
Module	12	Understanding Advanced Simplified Rep Functionality
Module	13	Creating and Using Assembly Structure and Skeletons
Module	14	Utilizing Design Exploration
Module	15	Project

---

# Introduction to Creo Simulate 4.0

## Overview

Course Code WBT-5104-0

Course Length 40 Hours

In this course, you will learn how to test, validate, and optimize product designs with the Creo Simulate module. Creo Simulate enables you to simulate structural and thermal loads on product designs. You will complete comprehensive, hands-on lab exercises that simulate realistic analysis and design optimization activities. You will also be introduced to advanced topics such as dynamic analyses, combined mechanical and thermal analyses, and Optimization Studies. After completing the course, you will be able to run engineering analyses and optimizations on your product design models.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Simulate 4.0

## Course Objectives

- Understand the basic Simulate analysis process
- Understand theory and simulate model topics
- Explore results
- Explore materials and material properties
- Understand and use Simulate idealizations
- Understand and use structural loads
- Understand and use structural constraints
- Run structural analyses
- Understand convergence
- Analyze assemblies with Simulate
- Complete design and sensitivity studies
- Run optimization studies
- Understand the basics of Thermal analysis

## Prerequisites

---

- Three months of Pro/ENGINEER Wildfire 5.0 or Creo Parametric experience

## Audience

---

- This course is intended for design engineers and mechanical designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to Creo Simulate
Module	2	Theoretical Foundations
Module	3	Simulation Models
Module	4	Materials and Material Properties
Module	5	Structural Constraints
Module	6	Structural Loads
Module	7	Meshing
Module	8	Convergence
Module	9	Structural Analysis
Module	10	Introduction to Results Evaluation
Module	11	Refining the Design
Module	12	Basic Model Debugging
Module	13	Singularities
Module	14	Analyzing Assemblies
Module	15	Shells
Module	16	Idealizations
Module	17	Thermal Analysis
Module	18	Advanced Analysis
Module	19	Project

---

# Detailing Using Creo Parametric 4.0

## Overview

Course Code	WBT-5105-0
Course Length	24 Hours

In this course, you will learn how to quickly create detailed drawings using information captured within 3-D design models. You will also learn how to create drawings, how to detail drawings, and how to take advantage of the parametric and associative nature of Creo Parametric 4.0 when configuring drawings. After completing this course, you will be able to create production drawings suitable for manufacturing.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

## Course Objectives

- Understand the drawing development process
- Create new drawings using formats and drawing templates
- Create different types of views in drawings
- Create dimensions and notes
- Control display options using layers
- Apply dimensional and geometric tolerances in drawings
- Add draft geometry and symbols to drawings
- Use layers in drawings to control the display of views and detail items
- Create drawing tables and a bill of materials
- Create drawing formats
- Configure the drawing environment
- Manage large drawings

## Prerequisites

---

- Introduction to Creo Parametric 4.0

## Audience

---

- This course is intended for mechanical designers and design engineers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to Drawings
Module	2	Creating New Drawings
Module	3	Creating Drawing Views
Module	4	Adding Model Details to Drawings
Module	5	Adding Notes to Drawings
Module	6	Adding Tolerance Information
Module	7	Adding Draft Geometry and Symbols
Module	8	Using Layers in Drawings
Module	9	Creating and Using Tables in Drawings
Module	10	Using Report Information in Drawings
Module	11	Creating Drawing Formats
Module	12	Configuring the Drawing Environment
Module	13	Managing Large Drawings

---

# Surfacing Using Creo Parametric 4.0

## Overview

Course Code	WBT-5106-0
Course Length	24 Hours

In this course, you will learn how to use various techniques to create complex surfaces with tangent and curvature continuities. You will also learn how to manipulate surfaces using editing tools, and analyze surfaces for quality and desired characteristics. In addition, you will learn how to create solid features using the surfaces as references. After completing this course, you will be well prepared to create complex shaped models using surfaces in Creo Parametric.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo 4.0 U360.

## Course Objectives

- Describe surface modeling and its terminology
- Learn advanced selection techniques
- Create advanced datum features
- Use advanced sketching techniques
- Learn basic surfacing tools
- Create various boundary surfaces
- Create variable section sweep surfaces
- Create helical sweep surfaces
- Create swept blend surfaces
- Utilize surface analysis tools
- Extend and trim surfaces
- Manipulate surfaces
- Create and edit solid models using surface quilts
- Utilize the master model technique

## Prerequisites

---

- Introduction to Creo Parametric 4.0

## Audience

---

- This course is intended for mechanical designers, design engineers, industrial designers, and related roles
-

## Table of Contents

Module	1	Surface Modeling Overview
Module	2	Advanced Selection
Module	3	Advanced Datum Features
Module	4	Advanced Sketching
Module	5	Basic Surfacing Tools
Module	6	Boundary Blend Surfaces
Module	7	Sweep Surfaces with Variable Sections
Module	8	Helical Sweeps
Module	9	Swept Blends
Module	10	Analyzing Surface Curvature
Module	11	Additional Surface Analysis Tools
Module	12	Extending and Trimming Surfaces
Module	13	Manipulating Surfaces
Module	14	Creating and Editing Solids using Quilts
Module	15	Master Model Technique
Module	16	Project

---

# Sheetmetal using Creo Parametric 4.0

## Overview

Course Code WBT-5107-0

Course Length 16 Hours

In this course, you will learn how to create sheetmetal parts in Creo Parametric. The course builds upon the basic lessons you learned in Introduction to Creo Parametric 4.0 and serves as the second stage of learning. In this course, you will learn how to design sheetmetal parts and assemblies, including sheetmetal production drawings. All the functions needed to create sheetmetal parts, drawings, and assemblies are covered. Upon completion of this course, you will be able to create sheetmetal design models, create the flat state of the model, and document both in production drawings.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0.

## Course Objectives

- Create, convert, and display the sheetmetal model
- Use methods of developed length calculation
- Use primary and secondary wall features, as well as partial walls
- Use bend relief
- Use unbend and bend back features
- Apply sheetmetal bend features
- Use flat patterns
- Create sheetmetal cuts
- Create forms
- Use notch and punch features
- Utilize the sheetmetal environment setup, sheetmetal design information tools, and sheetmetal design rules
- Detail sheetmetal designs

## Prerequisites

---

- Introduction to Creo Parametric 4.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles can also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to the Creo Parametric Sheetmetal Design Process
Module	2	Sheetmetal Model Fundamentals
Module	3	Creating Primary Sheetmetal Wall Features
Module	4	Creating Secondary Sheetmetal Wall Features
Module	5	Bending and Unbending Sheetmetal Models
Module	6	Sheetmetal Form Features
Module	7	Modifying Sheetmetal Models
Module	8	Sheetmetal Setup and Tools
Module	9	Detailing Sheetmetal Designs
Module	10	Design Project

---

# Milling using Creo Parametric 4.0

## Overview

---

Course Code	WBT-5108-0
Course Length	40 Hours

In this course, you will learn how to machine products using Creo Parametric manufacturing tools. This course covers creating tool paths for three axis milling machines. During the course, you will learn how to complete each phase of the manufacturing process. You will start by creating manufacturing models and configuring the manufacturing environment. This will include configuring tools, fixtures, and machining operations. You will then learn how to create milling sequences, holmaking sequences, and post-process cutter location (CL) data to create machine code. After completing the course, you will be able to create numerical control (NC) programs for milling machines and post-process cutter location (CL) data to create machine specific code.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 B000.

## Course Objectives

---

- Understand the manufacturing process
- Create and configure manufacturing models
- Configure the manufacturing environment
- Create and modify milling sequences
- Create and modify holmaking sequences
- Use the process manager to create NC sequences
- Post-process cutter location (CL) data

## Prerequisites

---

- Introduction to Creo Parametric – Fundamentals (Web Based Training) or equivalent experience

## Audience

---

- This course is intended for manufacturing engineers and NC machinists
-

## Table of Contents

Module	1	Introduction to Manufacturing
Module	2	Creating Manufacturing Models
Module	3	Configuring Operations
Module	4	Using Reference Models
Module	5	Using Workpiece Models
Module	6	Creating and Using NC Model Assemblies
Module	7	Creating and Configuring a Work Center
Module	8	Creating and Configuring Tools
Module	9	Using Template Manufacturing Models
Module	10	Using Manufacturing Parameters
Module	11	Creating Face Milling Sequences
Module	12	Creating Volume Milling Sequences
Module	13	Creating Profile Milling Sequences
Module	14	Creating Straight Cut Surface Milling Sequences
Module	15	Creating From Surface Isolines Surface Milling Sequences
Module	16	Creating Cut Line Surface Milling Sequences
Module	17	Advanced Surface Milling Options
Module	18	Creating Roughing and Re-roughing Sequences
Module	19	Creating Finishing Sequences
Module	20	Creating Trajectory Milling Sequences
Module	21	Creating Holemaking Sequences
Module	22	Creating Engraving Sequences
Module	23	Using the Process Manager
Module	24	Creating and Post-Processing CL Data Files

---

# Introduction to Model Based Definition with Creo Parametric 4.0

## Overview

Course Code WBT-5109-0

Course Length 8 Hours

In this course, you will learn how to create an MBD model using a start part. You will discover how annotate mode provides the tools to create an MBD model using the MBD process within Creo Parametric 4.0. You will also learn about creating 3-D annotations and how to utilize them in combined states. You will manage the visibility of annotations within combination states. You will also create and modify various annotation elements, including dimensions, ordinate dimensions, datum reference features, geometric tolerances, surface finishes, symbols, notes, and datum targets.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 F000.

## Course Objectives

- Understand the introduction to Model Based Definition
- Prepare models for annotation
- Create annotation elements
- Modify annotation elements
- Complete combination states
- Publish for technical data packages

## Prerequisites

---

- Core Creo knowledge in parts and drawings
- Experience in Creo modeling
- Experience in Creo drawing creation

## Audience

---

- This course is intended for any CAD designer involved in creating Model Based Definition models at his or her company. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to Model Based Definition
Module	2	Preparing Models for Annotation
Module	3	Creating Annotation Elements
Module	4	Modifying Annotation Elements
Module	5	Completing Combination States
Module	6	Publishing for Technical Data Packages

---

# Introduction to Creo Direct 4.0

## Overview

Course Code WBT-5110-0

Course Length 8 Hours

In this course, you will learn direct modeling using Creo Direct 4.0. You will become familiar with Creo Direct's interface and approach to direct modeling, including how to quickly create sketches with precision, transform sketches into 3-D shapes, and directly manipulate existing geometry with ease. You will also learn how to assemble and reposition components in an assembly, as well as use existing geometry in an assembly to create part geometry.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Direct 4.0 M020.

## Course Objectives

- Understand the Direct Modeling approach to creating geometry
- Sketch precise 2-D geometry without constraints
- Create 3-D shapes from the 2-D geometry by extruding, revolving, and sweeping sketches and sketch regions
- Create datum axes and datum planes
- Create engineering geometry, including holes, rounds, chamfers, draft, and shells
- Pattern geometry in one and two directions
- Use measure tools and create part and assembly cross-sections
- Rapidly select and directly modify 3-D shapes in your models
- Understand the direct approach to creating assemblies
- Edit component position in an assembly
- Create new components and design components in the context of an assembly

## Prerequisites

---

- Introduction to Creo Parametric or equivalent experience

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to Creo Direct
Module	2	Creating Sketches in 2-D Mode
Module	3	Creating Geometry Shapes
Module	4	Creating Datums
Module	5	Creating Engineering Geometry
Module	6	Measurements and Sections
Module	7	Editing 3-D Geometry
Module	8	Working with Assemblies

---

# Introduction to Creo Options Modeler 4.0

## Overview

Course Code WBT-5113-0

Course Length 8 Hours

In this course, you will learn how to use Creo Options Modeler to create configurable assemblies. You will begin by exploring a completed configurable assembly that has multiple variations created. You will then learn how to establish interchangeability between components, and how to create and assemble configurable products, configurable modules, and module variants. Then, you will become familiar with the creation of options and choices, which will enable you to explore usage of the Variant Builder to configure assembly variants. Finally, you learn how to leverage an existing design assembly and develop a configurable product assembly containing multiple design variations.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 (F000).

## Course Objectives

- Understand and use Creo Options Modeler
- Create interchange assemblies
- Create configurable modules and products
- Define options and choices
- Utilize configurable assemblies
- Understand how to manage large Options Modeler assemblies with and without Windchill

## Prerequisites

---

- Introduction to Creo Parametric 4.0
- Advanced Assembly Design using Creo Parametric 4.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to Creo Options Modeler
Module	2	Creating Interchange Assemblies
Module	3	Creating Configurable Modules and Products
Module	4	Defining Options and Choices
Module	5	Utilizing Configurable Assemblies
Module	6	The Options Modeler with Very Large Assemblies and Windchill
Module	7	Project

---

# Introduction to Schematics 4.0

## Overview

Course Code	WBT-5114-0
Course Length	24 Hours

In this course, you will learn how to use Creo Schematics to create schematic diagrams for both electrical harness and piping designs. You will also learn how to administer the Creo Schematics working environment, configure the catalog library, and create functional block diagrams and block interconnect diagrams. In addition, you will learn how to create electrical circuit diagrams, wiring diagrams (including wire interconnect diagrams), and process and instrumentation design diagrams for piping systems. Finally, you will learn how to use wiring diagrams and process and instrumentation design diagrams to configure 3-D harness designs and industrial piping designs created within Creo Parametric.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Schematics 4.0.

## Course Objectives

- Understand the 2-D schematic design processes for electrical harness designs and piping designs
- Configure the Creo Schematics working environment
- Create and configure the catalog library
- Create functional block diagrams (including block interconnect diagrams)
- Create wiring diagrams (including wire interconnect diagrams)
- Understand the automated design process for CID to WID.
- Create process and instrumentation design diagrams
- Communicate diagram information to Creo Parametric

## Prerequisites

---

- None

## Audience

---

- This course is intended for engineers involved in the schematic 2-D layout of either electrical diagrams or piping diagrams. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to Creo Schematics
Module	2	Configuring the Working Environment
Module	3	Configuring Designs and Diagram Sheets
Module	4	Configuring Catalog Properties
Module	5	Creating Design Templates and Template Sheets
Module	6	Using Creo Schematics Tools
Module	7	Creating Catalog Artifacts
Module	8	Creating and Configuring a Central Catalog
Module	9	Reviewing Designs
Module	10	Instancing and Manipulating Objects
Module	11	Creating Block Diagrams
Module	12	Creating Wiring Diagrams
Module	13	Creating Interconnect Diagrams
Module	14	Automated Design Process for CID to WID
Module	15	Creating P and ID Diagrams
Module	16	Using Schematic Design Data in Creo Parametric Harness and Piping Designs
Module	17	Using Pro/DIAGRAM Information

---

# Mechanism Simulation Using Creo Parametric 4.0

## Overview

Course Code WBT-5122-0

Course Length 8 Hours

In this course, you will focus on learning advanced modeling and analysis skills. Topics will include developing the 3-D model, analyzing the mechanism model, and evaluating results. This course is designed for those with experience who want to add motion to their products and analyze dynamic reactions of moving components. These topics will enable you to measure dynamic reactions of components, measure the force required to keep a mechanism balanced, and determine the resting state of a mechanism. After completing this course, you will be prepared to work on mechanism designs using Creo Parametric Mechanism Dynamics Option (MDO).

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 M020

## Course Objectives

- Understand the mechanism dynamics option
- Apply force motors, springs, and dampers to assemblies
- Apply forces, torques, and gravity to assemblies
- Create dynamic analyses
- Create force balance analyses
- Create static analyses
- Measure forces, velocities, accelerations, and other reactions
- Evaluate results

## Prerequisites

---

- Introduction to Creo Parametric
- Mechanism Design using Creo Parametric

## Audience

---

- This course is intended for design engineers and mechanical designers who need to add and evaluate the motion of their assemblies. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to the Mechanism Simulation Process
Module	2	Adding Dynamic Entities to a Mechanism
Module	3	Analyzing the Mechanism Model
Module	4	Evaluating Analysis Results
Module	5	Project

---

# Finite Element Analysis using Creo Simulate 4.0

## Overview

Course Code WBT-5123-0

Course Length 4 Hours

In this course, you will learn about the complete finite element analysis process. You will define, analyze, and optimize product designs with Creo Simulate. You will complete comprehensive, hands-on lab exercises that cover the process, beginning with preparing your model and conclude with design optimization activities. After completing the course, you will be able to run basic engineering analyses and optimizations on your product design models.

At the end of each module, you will complete a skills assessment. The questions are used to help reinforce your understanding of the module topics and form the basis for review of any topics, if necessary.

This course has been developed using Creo Simulate 4.0 M020.

## Course Objectives

- Explain the basic Finite Element analysis process
- Define structural loads
- Define structural constraints
- Define and running structural analyses
- Review results
- Define and running design and sensitivity studies
- Define and running optimization studies

## Prerequisites

---

- Three months of Pro/ENGINEER Wildfire 5.0 or Creo Parametric experience

## Audience

---

- This course is intended for design engineers and mechanical designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Finite Element Process Overview
Module	2	Model Definition and Preprocessing
Module	3	Analysis and Results Process
Module	4	Design Variation and Optimization Process

---

# Update to Creo Parametric 4.0 from Creo Parametric 2.0

## Overview

Course Code WBT-5125-0

Course Length 16 Hours

In this course, you will learn how to utilize the variety of functionality enhancements in Creo Parametric 4.0. You will be introduced to user interface enhancements such as the mini toolbar and the new geometry selection filter. You will examine the Part Modeling enhancements to features such as negative depth, extrude features with offset depth, and new midplane datum plane type. You will learn about the new Sketcher enhancements, including the clipping the model, customizing line thickness, the new constraint appearance, and using sketch references. You will investigate the new Assembly capabilities such as automatic representations, mirror symmetry, and assigning materials. You will examine the new Datum Feature Symbol, Datum Target, Geometric Tolerance, and Driven Dimension functionality and workflows for 2-D drawings and review various detailing enhancements. You will learn the new Freestyle surfacing enhancements including using multiple objects, importing OBJ files, and using N-Gon faces, as well as new Style enhancements such as G3 connections, creating periodic and nonperiodic closed curves, and drop curves. You will learn to use the updated tools in Sheetmetal mode such as Twist Walls, Edge Bend Relief, and Close Corner edge treatment, as well as the enhancement for utilizing dependency control with punch and die forms. Finally, you will investigate the new Assembly capabilities such as the built-in hardware library and the Intelligent Fastener extension, as well as enhanced Assembly functionality such as heterogeneous (multi-CAD) assembly and the Design Exploration extension.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 (F000)

## Course Objectives

---

- Use the Interface enhancements in Creo Parametric 4.0
- Use the Part Modeling enhancements in Creo Parametric 4.0
- Use the Sketcher enhancements in Creo Parametric 4.0
- Use the Assembly Modeling enhancements in Creo Parametric 4.0
- Use the Drawing enhancements in Creo Parametric 4.0
- Use the Surfacing enhancements in Creo Parametric 4.0
- Use the Sheetmetal enhancements in Creo Parametric 4.0
- Use the Intelligent Fastener extension in Creo Parametric 4.0
- Use the Design Exploration extension in Creo Parametric 4.0
- Use Unite Technology in Creo Parametric 4.0

## Prerequisites

---

- Introduction to Creo Parametric 2.0, or equivalent experience with Creo Parametric 2.0

## Audience

---

- This course is intended for design engineers, mechanical designers, and industrial designers. People in related roles will also benefit from taking this course.
-

## Table of Contents

Module	1	Interface Enhancements
Module	2	Part Modeling Enhancements
Module	3	Sketcher Enhancements
Module	4	Assembly Enhancements
Module	5	Drawing Enhancements
Module	6	Surfacing Enhancements
Module	7	Sheetmetal Enhancements
Module	8	Utilizing Intelligent Fasteners
Module	9	Utilizing Design Exploration
Module	10	Using Unite Technology

# Creo Parametric 4.0 for SolidWorks Users

## Overview

---

Course Code      WBT-5126-0

Course Length    24 Hours

In this course, you will learn about core modeling skills. This comprehensive, hands-on course is specifically designed for existing SolidWorks users who want to become proficient with Creo Parametric as quickly as possible. Topics include understanding the interface and basic Creo Parametric concepts, selecting and editing, sketching tools, and basic feature, part, and assembly creation. The course also includes a comprehensive design project that enables you to practice your new skills by creating realistic parts. After completing the course, you will be well prepared to work effectively on product design projects using Creo Parametric.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in PTC University Proficiency intended to evaluate your understanding of the course as a whole.

This course has been developed using Creo Parametric 4.0 M010.

## Course Objectives

---

- Learn the basic Creo Parametric modeling process
- Learn how to use the Creo Parametric interface
- Select and edit geometry, features, and models
- Sketch geometry and use tools
- Create sketches for features
- Create extrudes, revolves, and profile ribs
- Utilize internal sketches
- Create sweeps and blends
- Create holes, shells, and drafts
- Create rounds and chamfers
- Assemble with constraints
- Lay out drawings and create views
- Create drawing annotations

- Investigate parent/child relationships
- Resolve failures and seek help
- Complete a comprehensive design project

## Prerequisites

---

- Knowledge of SolidWorks, including an understanding of solid modeling, feature-based, parametric, and associative concepts

## Audience

---

- This course is intended for product designers, drafters, and industrial/conceptual designers. People in related roles can also benefit from taking this course.
-

## Table of Contents

Module	1	Introduction to the Creo Parametric Basic Modeling Process
Module	2	Using the Creo Parametric Interface
Module	3	Editing Geometry, Features, and Models
Module	4	Sketcher Geometry and Tools
Module	5	Creating Extrudes, Revolves, and Ribs
Module	6	Creating Sweeps and Blends
Module	7	Creating Holes, Shells, and Draft
Module	8	Creating Rounds and Chamfers
Module	9	Project I
Module	10	Assembling with Constraints
Module	11	Introduction to Drawings
Module	12	Resolving Failures and Seeking Help

---

# Creo Parametric Modeling Foundations

## Overview

---

Course Code	WBT-5127-0
Course Length	4 Hours

In this introductory course you will learn how to model using Creo Parametric, a CAD platform used by engineers and designers across the globe.

The course is broken down into two sections and includes presentations, demos, and exercises. It takes approximately 3 hours to complete these activities.

By the end of the course, you will have a solid grasp of how to create parts using Creo Parametric.

This course is applicable to core modeling for Creo Parametric 1.0, Creo Parametric 2.0, Creo Parametric 3.0, and Creo Parametric 4.0.

## Course Objectives

---

- Identify functional areas of the Creo Parametric UI.
- Use spin, pan, and zoom functions on a part in Creo Parametric.
- Interpret the different colors used in a model for selection and preselection.
- Sketch a basic shape.
- Create extrude and round features.
- Apply a material to a part.
- Edit a part.

## Prerequisites

---

- This introductory course is for all learners.
- An instance of Creo Parametric 4.0 is required to complete the exercises. To access a 30 day free trial of Creo Parametric 4.0 for the exercises go to <http://www.ptc.com/cad/creo/parametric/free-trial>.

## Audience

---

- Anyone interested in learning about Creo Parametric with hands-on projects.

## View Course
